## WORK EXPERIENCE

June 2014 - May 2017  
«WebWolf»  
**Web-developer**

Responsibilities of:

- fullstack development of sites on Wordpress, Opencart, Joomla;
- development of new web-services on Yii, Laravel;
- implementation of SEO specialists' recommendations;
- conducting development of frontend and backend parts;

While working:

- have developed over 120 sites of various complexity;
- have become a head of development department in the first year;
- all the developed sites were made from scratch, without the use of templates and constructors;
- developed and integrated functional for several large projects, for example roomelectro.ru (over 100.000 visits a day)

May 2017 - present time  
«Minus30»  
**Development Team Lead**

Responsibilities of:

- development complex web-services on Laravel;
- development architecture of databases;
- code refactoring;
- fullstack development sites on Wordpress, Opencart, Joomla.

I have personally:

- Developed a system for managing company's clients
- Developed several complicated REST API systems
- Written two Android applications on Java
- Developed several dozen sites for company's clients

## PORTFOLIO

### 1. CRM Development for company's clients managing

PHP, HTML, CSS, Blade, Sass, Javascript

Part of functionality:

- Adding and managing company's clients
- Monitoring the performance of clients sites by checking the server response and / or checking for the presence of a certain meta tag
- Adding and monitoring data on advertising budgets of clients via Yandex.Direct API.
- Notifications to managers in the Telegram messenger about the unavailability of the site and / or insufficient balance on the advertising budget.
- Monitoring of payments of recurring clients and automatic sending of invoices for payment by mail.

### 2. SAAS CRM to control the game of poker. The service is still under development

PHP, HTML, CSS, Blade, Sass, Javascript, Vue

[poker-manage.com](http://poker-manage.com)

Part of functionality:

- RBAC
- Creating, editing, and operating poker tournaments.
- Possibility to control from various devices and output information to various devices.
- Web sockets are used to exchange and update information. (Centrifugo и Pusher)
- Statistics of the games played in the form of graphs are displayed using VUE
- All tournament management is done on one page. Managing the addition of players, rebuys and addons. Automatic prize pool calculation. Average stake calculation. Display of players who decided to pay for a tournament after.
- Dealers managing page. Adding, editing and etc build on VUE and Vue Router
- Calculation and management of the rake system

Demo access is available:

[poker-manage.com](http://poker-manage.com)

- login: yourmaze
- password: 123

### 3. Service for crypto project

PHP, HTML, CSS, Blade, Sass, Javascript

[crypto.minus-30.ru](http://crypto.minus-30.ru)

Service was developed for a client's crypto project.

This project is interesting for calculating probabilities. The goal was to calculate the probability k number of hits in participations, having n tries. The calculation is carried out according to the Bernoulli theorem.

### 4. Android application for children's quests "Questush".

Java, Android Studio

Functionality:

- Audio and video transmission control
- Downloading content for a separate quest after purchasing, using the xfetch2 library
- in app purchases (android.billing)
- and etc.

The project is interesting because without the knowledge of Android and JAVA development, in two months I created a complex working application and placed it on PlayMarket.

### 5. Several examples of developed sites

Wordpress, Opencart
